## Thermocouple Reference Unit TRUrac Model 847

## ■ Rack Mounted

- Large Capacity
- Approved for Power Station Use

The TRUrac is a $0^{\circ} \mathrm{C}$ or elevated temperature thermocouple reference system mounted in a 19" chassis. It has been developed for situations where ambient temperature can be up to $65^{\circ} \mathrm{C}$.

The reference temperature is normally set to $0^{\circ} \mathrm{C}$ or between $45^{\circ} \mathrm{C}$ and $70^{\circ} \mathrm{C}$. For other temperatures please contact Isotech.

An alarm will be activated should the reference temperatures deviate by more then $0.2^{\circ} \mathrm{C}$.

Inside the rack case is a high stability thermal block which has a capacity of up to 100 thermocouple channels, the probe wires being terminated at the rear of the unit on rail mounted screw terminals.

To special order a second thermal block may be fitted to allow a capacity of 200 channels in a single unit.

The customer simply connects their thermocouple wires and copper output wires to these terminals. All the thermocouple cold junctions are inserted into a metal oven block which is accurately temperature controlled.

## How to order

Should be specified uniquely on each order.
Please discuss your exact requirements with us before ordering.

[^0]:    Note:
    Rack mounted Temperature Thermocouple Referencing System
    Large Capacity. Approved for Power Station Use.
    Reference temperatures set to $0^{\circ} \mathrm{C}$ or between $45^{\circ} \mathrm{C}$ and $70^{\circ} \mathrm{C}$.
